Elias Cohen

Senior Product Manager

eliascm1@gmail.com • (+52) 551-097-9706 • LinkedIn • Mexico City, Mex • iameliascohen.com

SUMMARY

Senior Product Manager with 6+ years in B2B SaaS, specializing in workflow automation, enterprise integrations, and AI-powered features. Work spans early-stage startups to enterprise, with a consistent focus on reducing operational friction and driving adoption. Comfortable going deep with engineering on APIs, SQL, and AI product decisions when it matters.

EXPERIENCE

Product Manager, BetterCloud

Dec 2023 – Present | Mexico City

Overhauled how integrations were built: moved from one-off customer requests to full-coverage platform builds. Researched action needs across the customer base, shipped 10+ automation actions across 30+ integrations, and drove ~15% growth in automation adoption.

Fixed a systemic identity matching bug where users with secondary emails weren't recognized by workflows. Rearchitected the merge logic and added manual admin controls, resolving one of the most persistent pain points in the support queue.

Replaced generic error messages with specific, admin-readable diagnostics that told customers what went wrong and how to fix it. Reduced workflow-related support tickets by ~35%.

Building an AI reporting layer for IT teams that lets users query compliance, ROI, and adoption data through natural language. Currently in beta with enterprise customers.

Built a weighted scoring model for roadmap prioritization, replacing a largely gut-feel process. Adopted by multiple PMs across the product org.

Product Manager, LeadGenius

Oct 2022 – Sep 2023 | Mexico City (Promoted from Jr. PM)

Promoted from Jr. PM to PM within the year, with scope expanding from agile facilitation to owning PRDs, working directly with engineering on technical approach, and validating product fit with stakeholders.

Owned the browser extension, a cross-platform tool that pulled prospect profiles from LinkedIn and major CRMs into active campaigns.

Product Manager, La Frutería

Jul 2020 – Oct 2022 | Mexico City (Began as generalist, grew into PM)

Took a grocery delivery mobile app from idea to v1 launch on iOS and Android, growing it to 4,500+ users and iterating continuously based on customer feedback.

Found serious UX issues in the app's original design: buttons cut off, broken flows, no visual identity. Built a complete Figma prototype from scratch, validated it with heavy users, and pitched it to the founder. The redesign shipped and drove a ~20% increase in order creation.

Acted as the sole PM and UX resource across 3 simultaneous products: a mobile grocery delivery app, a web-based cleaning service platform, and a parcel delivery app. Primary point of contact with engineering, making calls on technical approach alongside product and design decisions.

Redesigned the cleaning service site to include a dynamic self-serve quote generator, removing manual back-and-forth from the sales process.

SKILLS

APIs • SQL • Cloud SQL • Tableau • Figma • Fullstory • Notion • AI feature development • Analytics

EDUCATION

B.S. Computer Science

Universidad Iberoamericana | 2022
